Acknowledgment

The Palestinian Central Bureau of Statistics (PCBS) would like to thank the Ministry of Agriculture (MoA) employees and appreciates their commitment to bringing this achievement into light.

The funding for this report (Agricultural Statistics in the Palestinian Territory: 2007/2008) was provided by the Palestinian National Authority (PNA), and the Core Funding Group (CFG) for 2009. CFG member include Representative Office of Norway to PNA; Representative Office of Netherlands to PNA; Swiss Agency for Development and Cooperation (SDC).

Printing of this document has been produced with the financial assistance of the European Union. The contents of this document are the sole responsibility of the PCBS.

On this occasion, the PCBS extends special thanks to the members of the CFG and EU for their support.

Important Note

The role of PCBS was restricted to editing and programming of agricultural statistics questionnaires for the agricultural year 2007/2008 that have been filled by agricultural engineers at the MoA, and also estimation of some variables for agricultural accounts in coordination with specialists at the MoA.

The data has not been collected according to the international recommendations about the Statistical Unit, so the users should deal cautiously with this data,

For the preparation of this report, value-added is calculated on the basis of agricultural year, which extends from 01/10/2007 until 30/09/2008, for more details about the calculation of methodology of value added can be found in the methodology (Chapter 4)

Preface

Providing agriculture statistics to decision makers is a vital necessity for formulating policies and monitoring progress and development in the agriculture sector. PCBS is aware of this importance, and works in cooperation and coordination with the MoA to provide users in both governmental and private sectors with relevant agriculture statistics on a regular basis.

This agricultural statistics report covers the agricultural year 2007/2008, and provides data about the most important statistical indicators; quantitative data covers the cultivated area by different types of crops, in addition to the productivity of the unit area. It provides also data about livestock and production by type and region. It also deals with the agriculture economy, including production value for both plant and livestock production, in addition to the economic statistical indicators such as the costs of intermediate consumption and the value added of the agriculture sector.

PCBS hopes that the data of this report will be a useful and helpful reference for decision and policy makers to develop this important sector in Palestine.

December, 2009

Executive Summary

This report is based on the annual questionnaire completed by the staff of the MoA according to the administrative classification adopted by the MoA for the Palestinian Territory. Data collection was conducted on the basis of locality as a statistical unit.

The results revealed that 1,854 thousand dunums of Palestinian farm land were cultivated in the Palestinian Territory during the agricultural year 2007/2008 of which 91.4% were in the West Bank and 8.6% in Gaza Strip; fruit trees constituted 63.2% of the cultivated area of the Palestinian Territory, while vegetables and field crops comprised 10.1% and 26.7% of the cultivated Palestinian areas respectively, 72.0% of the cultivated area in the Gaza Strip relied on irrigation, compared with only 8.7% for the West Bank. Comparing this year with the previous years the results showed that the cultivated area in this agricultural year is similar to that of 2001/2002 which was about 1,851 thousand dunums. The largest cultivated area in the Palestinian Territory was during the agricultural year 1997/1998 which amounted to 1,861 thousand dunums, whereas the smallest cultivated area in the Palestinian Territory was during the agricultural year 1998/1999 which amounted to 1,612 thousand dunums.

Results indicated that there was a decrease in the number of cattle to 32,986, the number of sheep to 688,899, the number of goats to 322,082, the number of broilers chickens to 27,682 thousand birds, and the number of layers chickens to 2,695 thousands birds in 2006/2007, in comparison with the previous year, 2006/2007. Results also indicated that there were 66,733 beehives during the agricultural year 2006/2007. Also the total of fishing from all types amounted to 2,844 tons.

The total value of agriculture production in the Palestinian Territory during the agricultural year 2006/2007 amounted to US\$ 1,366.6 million; of which 60.9% was for plant production and 39.1% was for livestock production. The cost of intermediate consumption in the Palestinian Territory during the agricultural year 2006/2007 amounted to US\$ 490.4 million. The value added of agriculture production in the Palestinian Territory during the agricultural year 2006/2007 amounted to US\$ 876.2 million.

Introduction

1.1 Introduction

Agricultural activity in the Palestinian Territory plays an important role in production activities; the contribution of the agricultural sector in the West Bank and Gaza Strip¹ was approximately 5.6% of GDP in 2007². It is known that the agricultural sector plays an important role in the national economy; agricultural exports contribute with a significant share of foreign trade, and provide foreign exchange. The agricultural sector provides many raw materials for various other economic sectors.

Due to unavailability of updated agricultural holdings, and to reduce the shortage of data in order to fulfill the needs for outstanding and meaningful agricultural statistics, the MoA used an annual questionnaire for covering 2007/2008. The data collected through such a questionnaire used locality as a statistical unit and not agricultural holding as recommended by the Food and Agriculture Organization of the United Nations (FAO).

This report represents the agricultural year 2007/2008, in which the Palestinian agricultural sector suffered from severe losses such as destruction of trees, bulldozing of lands, and killing of animals, killing and prevention of farmers from reaching their lands and farms. These conditions seriously affected the agricultural sector in general and especially farmers.

1.2 Objectives of Report

This report aims to achieve four objectives:

1. To provide data on agricultural production including planted area, yield, production, and production value of different crops (field crops, vegetables, and fruit trees) and the technical level used in production and irrigation in the various Palestinian Governorates.
2. To provide data on livestock production including livestock number, production, and production value of cattle, sheep, goats, broiler hens, layer chickens, beehives, and fish.
3. To provide data on agricultural production inputs including animal feeds, pesticides, fertilizers, seeds, chicks, veterinary medicine, water, electricity, and others.
4. To estimate the value added of the agricultural sector including plant and livestock production by estimating the value of agricultural production and the cost of agricultural inputs.

1.3 Report Structure

This report consists of five chapters; the first chapter covers the introduction, objectives and the structure of the report. Chapter two contains the main definitions used in the report. Chapter three presents the main results of plant and animal production. The fourth chapter discusses the methodology used in preparing this report including the questionnaire, data coverage, fieldwork, and results of production. The fifth chapter covers descriptive assessment of data quality. The report also includes the main statistical tables, figures, and maps.

Chapter Two

Concepts and Definitions

This chapter presents the main concepts and definitions used to derive the main indicators of agricultural statistics. These concepts and definitions are based on international recommendations in the field of agricultural statistics, and they are the same in all subjects in PCBS. The main concepts and definitions mentioned in this report are:

Agricultural Year:

The period covering first of October to the end of September of the next year (12 months).

Arable land:

All land used for temporary crops or used as meadows.

Irrigated Area:

Gross area of land that normally is provided with water other than rain for the purpose of improving production.

Area Under Permanent Crops:

Is the area devoted to fruit trees that do not need to be replanted annually, or area of fruit trees mixed with other crops (inter-cropped).

Area of Protected Crops:

Is the use of various plastic covers (houses or tunnels) or glass houses to increase the productivity of plants and to avoid drop in temperatures and fluctuations of day and night temperatures and hence the risks associated with that. Plastic-culture is used in many instances for off-season production, i.e. production of certain crops earlier than normal

Productivity:

Is the average production of the unit area (dunum) in kilogram during the agricultural season.

Value of Agricultural Production:

Is the market value of agricultural products assuming farm gate prices. These products do include also the intermediate products like green forages, straw, manure, and cereals for feed and feed mixes.

Intermediate Agricultural Products:

Agricultural products reused in the agriculture production of another product within the agricultural sector. Intermediate products include forages, straw, animal manure used as fertilizer, cereals etc.

Agricultural Intermediate Consumption:

Agricultural inputs include all items purchased or made available and used that year to enable and improve agricultural production which include chemical fertilizers, manure, seed, water, feed, ...etc

Value Added:

Is the difference between agriculture income and paid value of agriculture inputs. Land lease, interest on invested capital and labor inputs are excluded from agriculture inputs in the calculation of value added.

Symbols Used in Tables:

(-): Nil

(0): Less than half of the unit.

Main Findings

3.1 Agricultural Production

Data revealed that 1,854 thousand dunums of Palestinian farm land were cultivated in the Palestinian Territory during the agricultural year 2007/2008, of which 91.4% in the West Bank and 8.6% in the Gaza strip. The livestock production of the same year was as follows: 32,986 cattle, 1,010,981 sheep and goats, 27,682 thousand broiler chickens, and 2,695 thousand layer chickens.

A- Plant Production:

According to the results, fruit trees constituted 63.2% of the cultivated area of the Palestinian Territory, while vegetables and field crops comprised 10.1% and 26.7% of the cultivated Palestinian areas respectively, 72.0% of the cultivated area in the Gaza strip rely on irrigation compared with only 8.7% in the West Bank during the agricultural year 2007/2008.

Figure 1: Percentage Distribution of Cultivated Area of Fruit Trees, Vegetables and Field Crops in the Palestinian Territory, 2007/2008

B- Livestock Production:

1. Cattle: Results showed that the total number of cattle in the Palestinian Territory during the agricultural year 2007/2008 was 32,986 of which 28,477 were in the West Bank, and only 4,509 in the Gaza strip. The Holstein-Friesian is the most common breed in Hebron, while local breeds are dominant in Tubas. Cattle production is mostly widespread in Hebron, Jenin and Nablus respectively.

2. Sheep and Goats: The total number of sheep in the Palestinian Territory during the agricultural year 2007/2008 reached 688,899 distributed as follows: 639,159 in the West Bank and 49,740 in the Gaza strip, 27.6% of sheep is in Hebron, then Jenin, Nablus and Bethlehem. There are 322,082 goats in the Palestinian Territory, 3.5% in the Gaza strip and 96.5% in the West Bank mainly in Hebron, Jenin, and Bethlehem respectively.

3. Poultry: Results showed that the total number of broiler hens during the agricultural year 2007/2008 was 27,682 thousand birds. 54.1% of Palestinian broiler production is found in the West Bank, and 45.9% in the Gaza strip. There are 7,713 thousand birds in Hebron constituting 27.9% of the total broiler production in the Palestinian Territory followed by Khan Yunis and Deir Al-Balah.

There were 2,695 thousands layer birds in the Palestinian Territory including 1,995 thousand birds in the West Bank and 700 thousand birds in the Gaza strip. 19.7% of Palestinian layer birds' production was found in Ramallah and Al-Bireh governorate, followed by Gaza and Tulkarm governorates respectively.

4. Beehives: The total number of beehives in the Palestinian Territory reached 66,733 including 63,782 modern beehives and 2,951 traditional beehives. 12.7% of the total number of beehives is found in Jenin governorate, followed by Hebron and Qalqilya governorates.

5. Fisheries: The total amount of fishing in the Palestinian Territory reached 2,844 tons in 2008, all were in the Gaza strip especially in Gaza governorate, which comprised 82.5% of the total amount of fishing.

3.2 Agriculture Production Value

The value of agricultural production of the Palestinian Territory during the agricultural year 2007/2008 amounted to about US\$ 1,366.6 million. The figure includes 60.9% of plant production (44.4% for the West Bank and 16.5% for the Gaza strip from the total value of agriculture production in the Palestinian Territory). Livestock production constituted 39.1% (of which 31.2% for the West Bank and 7.9% from the Gaza strip) from the total value of agriculture production in the Palestinian Territory). Hebron and Jenin governorates contributed 17.1%, 14.7%, respectively to the gross value of agricultural production.

Plant Production Value:

The value of plant production in the Palestinian Territory during the agricultural year 2007/2008 totaled approximately US\$ 831.9 million, of which 31.7% came from the value of fruit trees' production, 55.6% from vegetables including cut flowers, and 12.7% from field crops. 72.9% of plant production value was from the West Bank. The highest value of fruit tree production was in Hebron amounting to 24.3%, followed by Nablus at 13.5%. The highest value of vegetables including cut flowers was in Jenin and amounted to 18.1%, followed by Tulkarm at 14.2%. The value of field crops increased in Jenin to 31.3%, followed by Khan Yunis at 12.1%.

Livestock Production Value:

The value of livestock production (meat, dairy, eggs) in the Palestinian Territory during the agricultural year 2007/2008 registered approximately US\$ 534.7 million. The contributions of these sectors were as follows: 55.2% meat, 29.5% dairy, 11.1% eggs from the total livestock production of the Palestinian Territory. In the West Bank, livestock production represented 79.7% and in the Gaza strip, 20.3%. The major contributions based on geographical locations of the Palestinian Territory were from Hebron (27.3%), Jenin (13.0%) and Nablus (9.0%). The value of meat and milk production was concentrated in Hebron, Jenin and Nablus governorates, while the value of eggs production was concentrated in Ramallah and Al-Bireh, Hebron, Gaza and Tulkarm Governorate respectively.

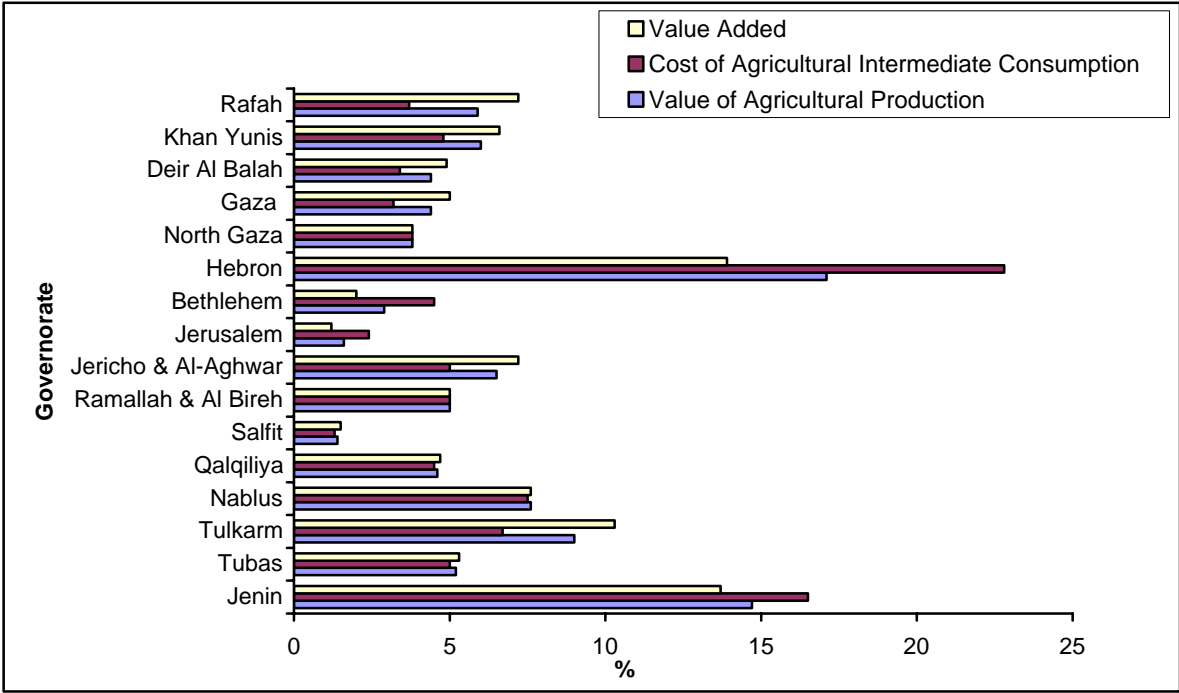

3.3 Intermediate Consumption Cost

The cost of intermediate consumption in the Palestinian Territory during the agricultural year 2007/2008 was about US\$ 490.4 million (of which 37.2% was plant production and 62.8% for animal production) where the highest costs was as follow: feed 46.0%, fertilizers 9.6%, veterinary medicine 7.7%, pesticides 7.3%, water and electricity 7.0%.

3.4 Value Added of the Agriculture Sector

The value added of agricultural production of the Palestinian Territory during the agricultural year 2007/2008 amounted to about US\$ 876.2 million. The value added of plant production was US\$ 649.3 million (71.2% for the West Bank and 28.8% for the Gaza strip), and livestock production value constituted 25.9% (of which 76.1% for the West Bank and 23.9% from Gaza Strip). Value added was concentrated in Hebron, Jenin, Tulkarm Governorate.

Chapter Four

Methodology

4.1 Questionnaire

MoA used an annual questionnaire for covering 2007/2008. The data collected through such a questionnaire used locality as a statistical unit. The questionnaire included the following items:

- Name of the locality in some cases the questionnaire may contain a number of small localities.
- Number of cattle by strain (local, Holland), by sex and age.
- Number of sheep and goats by strain (local, and other).
- Poultry including number of birds by type (layers and broilers).
- Bees including data about beehives' number by type (modern or traditional).
- Protected agriculture including data about planted area of different crops by type of covering (greenhouses, high tunnel, and land tunnel).
- Vegetables: area of vegetables by type of irrigation (rainfed, and irrigated).
- Fruit trees: area of bearing trees and area of unbearing trees by type of irrigation (rainfed, and irrigated).
- Field crops: area of field crops by type of irrigation (rainfed, and irrigated).
- Agricultural hardware and tools (tractors...etc.).

MoA used also an accumulative questionnaire that included the previous items in addition to plant, livestock, and beehives productivity for each governorate.

4.2 Coverage

The questionnaire of the MoA covered the entire localities of the Palestinian Territory as divided in accordance with the Administrative Division of 2007.

Reliance was made on administrative divisions of the PCBS in 2007 and documented in "Palestinian Central Bureau of Statistics, 2007. Palestinian Population Localities Manual. Reference (No. 14 P.C). Ramallah - Palestine. " .

4.3 Fieldwork

Agriculture extension agents collected the agricultural data of 2007/2008 and filled in the localities' questionnaires; some questionnaires, however, included data on more than one locality.

4.4 Official Editing

Completed questionnaires were officially edited by editing instructors in order to ensure data reliability.

Productivity was estimated by using a cumulative questionnaire for each government, then specialists from the MoA estimated productivity for missing data of some crops.

4.5 Data Processing

Data Entry and Editing:

Data were entered using Access program then converted into SPSS. Special editing instructions were prepared for editing the stored data to guarantee its reliability.

Results Extraction:

SPSS program was used for producing results and extracting variables and tables. Excel, however, was used in designing tables in order to facilitate the process of calculation and to produce the final tables. Some variables were based on the questionnaire data and other sources such as:

- Fish data obtained from the Department of Fisheries at the MoA.
- Agricultural production value was estimated by using producer prices for different crops and animals collected by the Price Department at PCBS for 2008.
- Estimation of animal production was based on calculations designed by MoA specialists on egg production and animal weight.
- Data of Intermediate Consumption Cost was estimated using forms prepared in collaboration with MoA in 1999/2000 for determining quantity and value of the intermediate consumption at governorate and crop level, including seeds, fertilizers, pesticides, water, electricity, oil, lubrication & fuel, maintenance, feeds, veterinary medicine, purchased chicks, and others. This has been addressed by percentage change of consumer price between 2000 and 2008.
- Value Added was calculated through Value of Agriculture Production minus Intermediate Consumption Cost, and the Value of Agriculture Production is a total agricultural production of various agricultural products multiplied by the price of these products, and Intermediate Consumption Cost including seeds, fertilizers, pesticides, water, electricity, oil, lubrication & fuel, maintenance, feeds, veterinary medicine, purchased chicks and others.
- Others of Intermediate Consumption Cost including mattress, gas, cardboard, trimming animals, frames, stearin, transport, fertilised bees, fattened calves, and rent of machines for plant production.
- Collected values were in New Israeli Shekel (NIS) and then converted to US\$ at an exchange rate of NIS 3.6198 in 2008.

Data Quality

5.1 Accuracy of the Data

In the process of data collection, each locality was used as a statistical unit despite FAO's recommendation of using agricultural holdings as statistical units. There are no locality records, therefore; data is subject to a margin of error affecting the level of their quality due to the data collection method. In addition, other reasons related to the production system and specific situation of the Palestinian agricultural sector affect the quality of the data. Data quality is also affected by a number of deficiencies resulting from data collectors' method of questionnaire collection.

- **Statistical Errors**

This type of error could be determined easily, and is the result of sampling errors. This type of error concerns the data of a survey sample.

- **Non-Statistical Errors**

Non-statistical errors are probable in all stages of the project, during data collection or processing. This is referred to the estimate of some of the data as agriculture production or intermediate consumption cost by agriculture extension agents, and data entry errors.

5.2 Comparability

Some comparisons were applied to data with the previous annual reports of the agricultural of the years 2006/2007 which indicated a reasonable matching between the results of previews reports.

5.3 Data Quality Assurance Procedure

To avoid errors and reduce its effects, completed questionnaires were officially edited by editing instructors in order to ensure data reliability. Data was entered using Access program then converted into SPSS, special editing instructions were prepared for editing the stored data to guarantee their reliability, also data entry staff was trained on the data entry program that was examined before starting the data entry process. Data was revised by the technicians of the MoA which stated that the data was logical and consistent with the agricultural situation in the Palestinian Territory.

5.4 Technical Notes

The following important notes and remarks should be taking into account in this report:

1. Data on crops productivity, agricultural commodity prices, and cost of agricultural inputs were estimated by PCBS in collaboration with the MoA.
2. The specialists in MoA revised this report; its data was compared to the agricultural statistics data of 2006/2007.
3. There are discrepancies in data quality from one Governorate to another due to differences in agricultural patterns and availability of administrative records on the agricultural sector of each Governorate.
4. There are many deficiencies in questionnaire collection, especially regarding data on nurseries and wells; therefore, such data were excluded from this report
5. The figures in Yield and Production columns in the Tables of Fruit Trees, Vegetables, and Field Crops do not contain the decimal fractions

6. For the first time since working in this report, average prices of agricultural commodities was used during the agricultural year which are from 1/10/2007 to 31/9/2008
7. Data of Intermediate Consumption Cost was treated by agricultural products treated with the price index for the main groups of the product, which may cause differences in values when compared with previous years, base year 2000
8. Collected values were in New Israeli Shekel (NIS) and then converted to US\$ at an exchange rate of NIS 3.6198 in 2008.
